

Docker Compose

- **Docker Compose** is a tool for defining and running **multi-container** Docker applications.
- It uses a **YAML** file to configure the application's services.
- With a single command, it **creates and starts** all the services from the provided configuration.

Docker Compose

docker-compose.yml

```
version: '2.1'

services:
  app:
    build: .
    depends_on:
      - db
  db:
    image: postgres:alpine
    environment:
      POSTGRES_USER: root
      POSTGRES_PASSWORD: secret
      POSTGRES_DB: app
    ports:
      - 5432:5432
```
