

# XI. Logs

## What are logs?

- The stream can be sent to a **log indexing and analysis system**, or a general-purpose data warehousing system.
- These systems allow for great power and flexibility for introspecting an app's behavior over time:
  - **Finding** specific events in the past.
  - Large-scale **graphing** of trends (such as requests per minute).
  - **Active alerting** according to user-defined heuristic.
